- **Databases:** MySQL, SQL Server, Microsoft Access.
- **Version Control:** Git.
- **Other:** Web APIs, ERP Development, Tally with GST.

EXPERIENCE

MR Softwares — ASP.NET Developer | June 2025 – Present

A School-based software can be developed as an ASP.NET web application, which is a dynamic website build using Microsoft's Asp.Net framework-ideal for managing tasks like student records, attendance, and online portals. A mobile application version can be created for smartphones or tablets to provide easy access for students and teachers, and parents using native, hybrid, or web app technologies with tools like Android Studio. MySql serves as a reliable open-source database to efficient store and manage school data such as grades, schedules, and user information across both web and mobile platforms.

Nehvij Technologies — Web Developerment Intern | Jan 2025 – May 2025

- Worked on building web Application using ASP.NET Technologies.
- Gained experience in both front-end and back-end development, wrote SQL queries for data retrieval and storage.
- Created and implemented database schemas using SQL Server for efficient data management.

WORK IN LIVE PROJECTS

eSchoolApp (ERP Solution)

- Worked on fee management modules add fee concession maker checker both Admin - Non Admin
- Worked on modules like Fee Management, Timetable, Attendance and Report Card, adding new features to enhance usability.
- Identified and resolved bugs across multiple modules to ensure smooth application performance
- Implemented and integrated payment gateways such as GrayQuest and worked on resolving issues and bug fixes for gateways including CCAvenue, NTT, and other payment integrations to ensure smooth and secure transaction processing.
- Developed monthly reports for better data analysis and decision making.

Shramdoot App (Employee Management)

- Worked on modules like staff shift management, staff attendance and payroll procession.
- Migrated outdated ASMX services to token-based APIs.
- Developed features for branch creation, shift assignment, attendance tracking, salary information, and leave management in the Shramdoot App.
- Designed and implemented role-based modules to ensure users access only relevant features and functionalities
- Created a consolidated Branch Details page showing total employees, branch info, and related data.

CRM (Ticket Management)

- Worked on Ticket Management system including ticket creation, assignment, and status tracking

SELF PROJECTS

Employee Feedback System (ASP.NET With C#, SQL)

- Designed and developed a responsive Employee Feedback System with role-based login for Admin and Employees.
- Integrated QR code-based feedback and interactive dashboards for real-time performance tracking across devices.

News Website (ASP.NET With C#, SQL)

- Developed a news portal to publish, manage, and categorize news articles with secure user authentication.
- Implemented database-driven features for article storage and user profile management.

My Store Desktop Billing App (ASP.NET With C#, SQL)

- Developed a desktop-based billing application for retail stores with features like invoice generation and product management.
- Improved the user interface and experience, focusing on ease of use, accuracy, and efficient billing operations.

E-Book Rental Platform (ASP.NET With C#, SQL)

- Built an e-commerce-style platform for renting e-books with online read and download.
 - Designed an intuitive interface and used SQL for backend data management.
-
